ESD- women's shoes

with AIR-MOVEMENT-ventilation system

The particular membrane with a porous structure absorbs the perspiration inside the shoe, carries it to the outside and is waterproof as well. The pores of the membrane are subtler than airdrops, which therefore can not enter the pores but they are large enough to let the vapour molecules permeate unresisted. By this means the sweat can exhaust as steam via the membrane of the sole to the outside.

AIR-MOVEMENT®-ventilating system

Lyon

ESD-slipper for ladies
high-quality Nubuk-leather
AIR-MOVEMENT-ventilation system
exchangeable
ARIZONE-footbed
Sizes: 35 – 43
Colour: blue
Art.-No.: 48.620.**

The ARIZONE-insole

actively regulates the foot climate. The perforated insole optimally absorbs the foot perspiration and actively releases the stored moisture via the AIR-MOVEMENT-ventilation system into room air.

Your benefit:

Your feet stay dry for a longer time. The AIR-MOVEMENT-ventilating system ensures a permanently well-ventilated climate.
